Abstract (en)
[origin: EP2219196A1] The button (1) has a housing that is formed from an operating head (2) and a base body (3). Housing guides (5) project from the operating head to the base body, where a spring element (6) is supported in the housing guides. The housing guides stay in effective-connection with two locking slides (8) during operation of operating head. The locking slides are arranged opposite to one another and comprise transparent recesses for light channels. Insertion bevels (7) are provided at ends of the housing guides.
