Abstract (en)

[origin: US2009154844A1] A bug proof bag for containing luggage or other items has a plurality of sides such that the sides are non-porous so as to prevent ingress of bugs into the bag and are smooth so as to offer substantially no harborages to bugs. A zipper in a closed state prevents ingress of bugs into the bag, and the zipper in an opened state permits access to an interior of the bag. The zipper, for example, has a slider and first and second locking strips. The bug proof bag may, if desired, also include a seal that seals ends of the first and second locking strips to the bag.
