Abstract (en)
[origin: CN101909677A] Disclosed is an injector for administering a product, comprising: a) an actuator (6, 7, 12, 13) which performs a rotary movement when actuated for administering purposes; b) an output device (9, 10) that performs a rotary movement for administering the product; and c) an engaging element (13) that can be moved from a disconnected state in which the actuator (6, 7, 12, 13) is rotatable relative to the output device (9, 10) into a coupled state in which the actuator (6, 7, 12, 13) is coupled in a rotationally fixed manner to the output device (9, 10) when the actuator (6, 7, 12, 13) is actuated in order to administer the product.
