Abstract (en)
[origin: WO2009063404A1] The invention relates to a respirator and/or anesthetic device comprising a display unit, a computer, at least one memory and program, and at least one input unit. At least two different user profiles that depend on the type of user and can be retrieved as required are provided in the memory. Said at least two user profiles determine both the representation in the display unit (1) and the input options in the input unit.
