Abstract (en)
[origin: WO2009068217A1] The invention relates to a drive device (20), particularly for the strand guidance of continuous casting units, comprising a drive motor (24), a transmission (23), a coupling (25), and optionally further housing parts and/or protective hoods as components of the drive device, wherein the motor is connected to the transmission via the coupling for torque transmission and the components of the device are connected to a base plate, wherein only one of the components of the device is connected to the base plate, and wherein the other components are directly or indirectly connected to the one component and are supported by it.
