Abstract (en)

[origin: WO2009075679A1] A paper processing tool (20) includes a base (32) having a receiving area (28) for selectively receiving a sheet of paper. The tool further includes a first lever(46) having a handle portion(58), the first lever(46) being pivotable relative to the base(32) about a first axis (A). An intermediate lever(64) is pivotable relative to the base (32) about a second axis (B) in response to movement of the first lever (46). At least one cutting element (24A,B,C)is arranged along a cutting plane (D4), the at least one cutting element (24A, B, C) being configured to selectively engage the sheet of paper. A drive lever (88) is actuable by the intermediate lever (64) to move the at least one cutting element (24A, B, C) relative to the base(32). The drive lever(88) is pivotable relative to the base (32) about a third axis (C) parallel to the cutting plane (D4).
