Abstract (en)
[origin: WO2009061275A1] The present invention relates to a loading pallet made of metal, comprising an elongate upper portion composed of profiles (1) which run in substantially the longitudinal direction of the pallet and constitute a load surface, profiles (2) which run on the underside thereof in substantially the transverse direction of the pallet in order to hold together the load surface profiles running in the longitudinal direction of the pallet, spacers (4) disposed on the underside of respective holding-together profiles running in the transverse direction of the pallet, and profiles (5) binding together the spacers, at opposite ends thereof, in substantially the longitudinal direction of the pallet, which profiles each have, running in substantially the longitudinal direction of the pallet, a bearing surface (6) for placing the pallet on a substrate. To ensure that it has the necessary strength and resistance even in its transverse direction, the loading pallet according to the present invention also comprises one or more reinforcing profiles (11) each disposed between two holding-together profiles (2) which run in the transverse direction of the pallet.
