Abstract (en)
[origin: WO2009058863A1] A system comprising a riser reactor comprising a gas oil feedstock and a first catalyst under catalytic cracking conditions to yield a riser reactor product comprising a cracked gas oil product and a first used catalyst; a intermediate reactor comprising at least a portion of the cracked gas oil product and a second catalyst under high severity conditions to yield a cracked gasoline product and a second used catalyst; a regenerator to regenerate the first used catalyst to the second catalyst; and a draw-off vessel to remove undesirable gases from the second catalyst from the regenerator.
