Abstract (en)  
[origin: WO2009069101A1] Between the surface (100) of the floating floor and the skirting board (1), or another vertical coat to be fixed to surrounding walls (103), there is interposed and fastened a plastic and elastic element (2) that, although it is put against the floor (100) to avoid unaesthetic and unhygienic interstices, does not allow the transmission of vibrations caused by acoustic impacts in the below floating floor. Said skirting board (1), adapted and designed to protrude from the fixing vertical wall to hide the gap existing between said wall and the floor, has a lower edge crossed by a longitudinal groove running lengthwise (1A) where the forced insertion of the finned projecting part (2A) of the plastic or elastic profile (2) can be operated.
