Abstract (en)
[origin: WO2009078777A1] A device for assembling in a window section (1) and in its casement (2) and where this device is a complete glass securing part (11) which is constructed of a glass block (10) and a blocking part 12. The glass securing part (11) and its glass block (10) has resilient lips (4) which engage in grooves (3) of the casement and which, when these lips is snapping in the groove, prevents that the glass securing part can be disassembled. Since the blocking part (12) extends upwards and in front of the lower part of the window section the window section cannot be removed from the casement. With the present device is consequently a protection against simple burglaries obtained, which in some cases are difficult to prove.
