Abstract (en)  
[origin: WO2009052822A1] The screening arrangement (1) has a top element (4), a bottom element (7) and a screening body (6). A parallel guidance cord system comprising two cords is provided. In a supply condition of the screening arrangement, at least one fitting (10) is releasably connected with the top element (4) and the bottom element (7) to provide a predefined distance between the bottom element (7) and the top element (4). Furthermore, the top element (4) is provided with angular brackets (85). The fitting or fittings (10) assist(s) in keeping the bottom element (7) steady at the predefined distance. This makes it possible to facilitate the mounting procedure.
