Abstract (en)

[origin: WO2009071339A1] According to one embodiment of the invention, an emergency call device for a vehicle is provided, by which means a data record is produced when a certain event occurs, said data record then being transmitted during the emergency call. The event can be an external request from an operator or a trigger signal inside a vehicle. In this way, the operator can obtain the most recent information at any point during the emergency call.
