Abstract (en)

[origin: WO2009080018A1] The invention relates to a method for diagnosing an electronic display device (1) having a screen (3) and a graphics memory (2), in which image data (14) of an image displayed on the screen (3) are stored or changed, wherein a value (15) characterizing the current consumption or the change in current consumption of the screen (3) or the display device (1) is measured, and wherein a reference value (16) characterizing the current consumption or the change in current consumption of the screen (3) or the display device (1) is determined on the basis of the image data (14) or the change in image data (14) and compared to the measured value (15).
