Abstract (en)

The invention is a new elastic element (E) for female parts of snap fasteners suited to retain the pin of the male part of said snap fasteners, comprising two or more substantially rigid opposite arched parts (E1, E2) connected at each of their adjacent ends by one or more elastic parts (E4) having the function of bringing and keeping together the ends of said arched parts (E1, E2) after the insertion or extraction of the pin of the male part, and wherein said elastic part (E4) has a multiple wave or sinusoidal shape, i.e. formed by alternately opposing curves (Ea, Eb, Ec, ..., En), and wherein said arched parts and said elastic parts form a generically closed ring shape.
