Abstract (en)  
The device (10) has a pushing member (54) moved relative to a covering (12) in a direction along a longitudinal axis (A-A') from an idle configuration towards a configuration for moving a reception body (14) to a removal position. A releasable retaining assembly has retention lugs (80) and a transverse abutment surface (64) retaining the body in a storage position, where the assembly is released by a passage of the pushing member from the idle configuration to the moving configuration. An elastic resilient urging member (56) resiliently urges the pushing member towards the idle configuration. The pushing member has a cover made of aluminum or plastic for covering a pushed-button. An independent claim is also included for a method for utilizing a cosmetic article.

Abstract (fr)  
Ce dispositif comprend un habillage (12) définissant une cavité intérieure (22) et un corps (14) mobile dans un premier sens par rapport à l'habillage (12) entre une position de stockage et une position d'extraction du corps (14) hors de l'habillage. Le dispositif comporte un organe de poussée (54), monté mobile par rapport à l'habillage (12) dans le premier sens entre une configuration de repos et une configuration de déplacement du corps vers sa position d'extraction. Le dispositif comprend un ensemble (80 ; 64) de retenue libérable du corps dans sa position de stockage, et un organe (56) de sollicitation élastique de l'organe de poussée (54) vers sa configuration de repos.
