Abstract (en)

[origin: EP2221144A2] The tool (2) has a laminar bearing side (15) facing a workpiece to be processed during processing of the workpiece. A stand device (14) i.e. aluminum die-casting part, is provided on a side opposite to the bearing side, where the side is detachably mounted on a housing body (4). The stand device is brought into a stop position at the housing body. The stand device is fixed against the housing body using manually and tool-freely operated fastening elements (22), so that the stand device is form-fitly and rotation-securely connected with the housing body.
