Abstract (en)
[origin: EP2221154A2] The tool (1) has a cutting blade (4) including a cutting edge (6) extending in a direction parallel to a rotation axis. The cutting blade is detachably arranged in a recess (14) of a housing (2). A loading body (12) is arranged in the recess and loads the blade in a working mode in a loading direction (P) to hold the blade on the housing. A springing element (20) exerts a force on the body in the loading direction in the mode. A guiding surface (F) runs in a plane (E), where the axis is parallel to the plane. The surface guides the movement of the body in the direction.
