Abstract (en)
[origin: EP2221425A1] The present invention relates to a wall frame comprising at least a first wall panel provided for positioning at a predefined distance from and opposite to a second wall panel, to define an inner volume between them, which wall panels are connected to each other in transverse direction of the wall frame by means of a plurality of connectors connected to an inner face of the first and second wall panel, wherein each connector comprises a plurality of connecting members, wherein the connecting members are spaced from each other in upright and in longitudinal direction of the wall frame, wherein the wall frame comprises at least one injection position to permit injection of filling material for filling the inner volume and wherein the connecting members comprise a fibrous reinforced plastic material.
