Abstract (en)

[origin: EP2221562A1] The freezer has two compartments separated from each other by walls e.g. intermediate walls (10, 14), horizontal intermediate wall (12), vertical partition wall (16). Setting units compartment specifically adjust a parameter e.g. temperature, of air in the compartments. One of the walls is repositioned, so that the larger compartment is developed from the compartments. Setting units are adjusted from compartment specific setting of parameter of the air to setting of parameter of the air in the larger compartment that is obtained by repositioning the walls.
