Abstract (en)

[origin: EP2222094A2] The housing has a battery bay (10) installed in an interior portion of a housing structure for pivoting movement into an open position. A securing element (20) is installed in the battery bay and pivoted between secured and unsecured positions. The security element comprises a recess (13) accessed with a tool from an exterior portion of the housing structure. The securing element is released from an engagement behind a projection (16) to allow the securing element to move into the unsecured position when the tool engages with the recess. The battery bay is allowed to move into the open position.
