Abstract (en)
[origin: WO2009080404A1] The invention relates to a machine tool having working field illumination disposed in a housing (12), comprising an illumination means (30) and a transparent element (50) which allows the light from the illumination means (30) to be led out toward the working field, wherein a light beam (56) can be deflected between the illumination means (30) and the transparent element (50). According to the invention, the transparent element (50) forms a region (12a) of the housing (12).
