Abstract (en)  
[origin: WO2009074571A1] In order to transfer an image coating from a carrier film to a printed sheet, an adhesive image layer is applied to the printed sheet. The carrier film comprising the image coating is then guided past the printed sheet while being pressed thereagainst in a film transfer module (2) such that the coating adheres at the joints and an image is generated. In order to improve the function, simplify the device, and increase flexibility, a holder for reels of the transfer film (5) is provided for easier handling.
