Abstract (en)

[origin: WO2009065655A1] The invention relates to a control device and a method for activating personal protection means for a vehicle, wherein an energy reserve provides electric energy for the activation. The invention proposes a control circuit forming at least one ignition impulse for activating each personal protection means from the electric energy with regard to a first ignition impulse amount and a first ignition impulse duration as a function of the personal protection means to be activated.
