Abstract (en)

[origin: WO2009068776A2] The invention relates to a device that comprises a bodywork part (1), a structural part (2), and a securing means (3) provided between the bodywork part (1) and the structural part (2) in order to connect them together while leaving a gap (Jm) between the bodywork part (1) and the structural part (2), that makes the securing means (3) visible from outside the vehicle. The device of the invention is characterised in that it comprises a member (4) provided in said gap so as to reduce the portion of the securing means (3) that is visible from the outside. The invention also relates to a vehicle including such a device.
