Abstract (en)
[origin: WO2009076783A1] The invention relates to a novel method for fastening at least one plate, such as a glass panel (1), in a profile (3), which has an assembly groove (17) for peripherally receiving an edge of the glass panel (1). The method is characterized in that on at least one of the glass panels (1) and an inside of the assembly groove (17) oriented parallel thereto an assembly rubber seal (10) is disposed, on the surface (24) of which facing the glass panel (1) a double-sided adhesive tape (13) having a cover film (23) that covers the side of the doublesided adhesive tape (13) facing the glass panel (1) is attached, wherein the glass panel (1) is inserted into the assembly groove (17) and is pressed against the double-sided adhesive tape (13) in the assembly groove (17) by at least one counter element (2) disposed on the opposite side of the glass panel (1), or by the opposite inside of the assembly groove (17), and wherein the cover film (23) is removed when the glass panel (1) is inserted into the assembly groove (17).
