Abstract (en)

[origin: WO2009065378A2] Disclosed is a sample arrangement for testing a joint which is under a static load or a load that can change over time. Said sample arrangement comprises at least two joining partners which are connected to one another along at least one common contact zone by means of the joint. The invention is characterized in that the joint has a continuous or discontinuous, linear or strip-type shape in a longitudinal direction, along which the joint is curved in at least some sections, while at least one joining partner has a three-dimensional shape.
