Abstract (en)
[origin: WO2009079023A1] A system and method for generating, executing and maintaining electronic contracts in connection with indirect financing transactions involving an acquisition by a customer of an asset offered by a vendor with financing provided by an independent finance source. In one example embodiment, the system includes an e-contracting component configured to generate an electronic contract having one or more signature fields. The contract further includes a contract identifier and one or more signature identifiers embedded therein. The e-contracting component provides the generated electronic contract to one or more contracting parties, including the customer, the vendor and the finance sources. The system further includes a holographic signature capture device configured to capture one or more holographic signatures indicating execution of the contract by the contracting parties. The capture device is further configured to transmit the captured signature information to the e-contracting component.
