Abstract (en)
[origin: WO2009065942A1] The invention relates to an electrical circuit comprising a power supply (Vsupply), a control means (3, 30) and a relay (1, 10) comprising a coil (2, 20) supplied by said power supply, the control means (3, 30) being capable of causing a contact of the relay to switch from a first position to a second position, characterized in that it includes current flow means capable of making a current flow through the contact in the first position, between the start of the controlling of the switching of the contact between a first position and a second position and its effective switch-over into the second position.
