Abstract (en)

[origin: WO2009083173A1] The invention relates to a protective device, particularly an overload relay, for attaching the same to a switching device, particularly a contactor. The housing wall of the protective device has at least one first and one second recess each on a first side facing the switching device, and on a second side facing away from the switching device, and the recesses are connected to each other such that the switching device is accessible through the recesses for the purpose of connecting a terminal lead.
