Abstract (en)

A rabbit element (1) for doors and windows, said rabbit element (1) comprising an insulation (2), where at least two sides of the insulation (2) have screwable plates (3) glued thereon. The invention also relates to a method of mounting the rabbit element (1) as well as use of the rabbit element. The said rabbit element (1) and the said method ensure complete airtightness between windows and doors and the facade plane, so that national and/or international requirements with respect to the airtightness of buildings may be observed. Also, line loss (heat loss in the edge zones) around windows and doors is prevented, thereby obviating the risk of draught, condensation and heat loss.
