Abstract (en)
[origin: EP2224080A2] The shaft has a cover (3), where the peripheral wall of the cover is surrounded by a peripheral wall of the shaft. A locking device is provided with a turning bolt (12), which meshes a bolt closure latch with a bolt section in the locked position. The locking device has locking threaded spindle. An arrester is arranged on the cover, which has a slot-shaped recess, which is as wide or high as the thickness of the bolt section (13), so that the bolt section enters into the recess.
