Abstract (en)
[origin: EP2224202A2] The system has a holding and supporting stock (10) comprising a pistol grip (12), a sideways-adjustable and height-adjusting cheek piece (15), and a pivotable and length-adjustable butt plate unit (16) which are assigned to a middle piece (14) forming a part of the stock, which is designed as a coupling for creating a positive connection between a weapon system and stock parts forming the stock. The positive connection can be released by the application of force. The middle piece surrounds a toothed telescoping tube, which is clamped to the middle piece by way of clamping points.
