Abstract (en)  
[origin: EP1921588A2] The method involves providing multiple road users with mobile transmitters, with which each individual journey data is wirelessly transmitted to a central computer (6). The journey data of multiple road users is collected and a route information concerning the individual route sections (7) is processed. The route information is determined depending on the time, and the route information is wirelessly transmitted to a receiving device of the road user. An independent claim is also included for a system for an execution of a method.
