Abstract (en)
[origin: WO2009086036A1] A physiologically acceptable composition, especially a cosmetic composition, comprising at least one polar modified wax and at least one viscosity increasing agent, as well as to methods of using such compositions. Polar modified waxes for use in the composition include a wax consisting essentially of polypropylene and maleic anhydride units, a wax consisting essentially of C26-C28 alpha olefin and maleic acid anhydride units, and mixtures thereof. Viscosity increasing agents for use in the composition include a polysilicone-polyamide copolymer, a nylon 611/dimethicone copolymer, an A-B polymer or an A-B-A polymer, where A represents a hard segment and B represents a soft segment, such as a polystyrene, and a liposoluble or dispersible rheological polymer, such as polyvinylpyrrolidone.
