Abstract (en)
[origin: WO2009067018A3] The present invention relates to a joining system for two building elements, comprising a first part (10) mounted on a first building element (1,2), a second part (20) mounted on a second building element (2,1) and a movable bridge element (110) which in a joined condition of the system is located partly inside the first part (10) and partly inside the second part (20). According to the invention the system comprises devices for horizontal fastening of the bridge element in at least one direction relative to the first and the second part, and devices for reducing the sound transmission through the system.
