Abstract (en)  
[origin: WO2009077303A1] The invention relates to a compressor, comprising a compressor chamber, in which a piston (32) can be moved, and a valve plate (12) delimiting the compressor chamber, in which at least one valve is configured by means of a blade (22) overlapping an opening (18) of the valve plate (12) in a closed position. A recess (39) is formed in the valve plate (12) opposite a center section (40) of the blade (22), which is positioned between a bottom (25) of the blade that is fixed on the valve plate (12) and a head of the blade (22) closing the opening (18).
