Abstract (en)
[origin: WO2009071083A2] The invention relates to a container (1) comprising an end wall (5), and air conditioning system (6), arranged in the end wall (5) and having an opening (14) on its underside through which it ejects an air current, a floor (2), provided with ducts, which guides the air current in a direction away from the end wall (5), and a guide wall (15) defining an air duct (16) together with a part of the end wall (5) and a part of the floor (2) when in the operating position, said air duct guiding the air current between the opening (14) and the ducts in the floor. The aim of the invention is to prevent the guide wall from being damaged by the forks of fork lifts. The invention is characterized in that the container (1) is equipped with a spring device that counteracts a movement of the guide wall (15) towards the end wall (5).
