Abstract (en)
[origin: WO2009083574A1] The subject of the present invention is an enduring universal tool for developing equipment tests, this tool and its implementation being as inexpensive as possible. This tool comprises in particular: a function for specifying requirements (2), a function for designing tests (5), a library of generic commands (11), engines for generating documents (3, 6, 9) and libraries for helping to convert high-level test programs into a low-level language (12, 13).
