Abstract (en)

[origin: WO2009078650A2] The present invention relates to a method for providing customized research information. A research supporting portal server searches a knowledge base included therein to extract information on topics of a domain of interest when domain selection information is received, generates a user profile information input image including the extracted information on the topics and provides the user profile information input image to a client. The client receives user profile information including a level of knowledge and a goal of a user about each of the topics through the user profile information input image and transmits the user profile information to the research supporting portal server. The research supporting portal server extracts research information on the topics using the information on the topics and the level of knowledge and the goal of the user, included in the user profile information, sets the research order of the extracted research information and provides the research order to the client. Information on topics of a specific domain can be provided to a client such that the client can make structural access to the current knowledge base and a user can make procedural access to topics in the relation of cause and effect.
