Abstract (en)  
[origin: WO2009076934A1] The invention relates to a switch with a manipulation element (12) which is mounted such that it can move in a manipulation direction (R), an operating element (14) which is coupled to the manipulation element (12), a manipulation element guide for guiding the manipulation element (12) in the manipulation direction (R), a switching element (16) which is coupled to the operating element (14) and is designed to switch an electrical contact, wherein the manipulation element (12), the operating element (14) and the switching element (16) are coupled such that a movement of the manipulation element (12) in the manipulation direction (R) leads to switching of the electrical contact. According to the invention, provision is made for the manipulation element (12) to be mounted through the manipulation element guide (17, 18, 38, 44) solely in a floating manner and at at least two bearing points (38, 44).
