Abstract (en)
[origin: EP2225973A2] The spring (1) has a spring body made of plastic and exhibits upper support surface (2), lower support surface (3) and spring elements that are arranged between the upper and lower support surfaces. The spring exhibits a form of a hollow strand profile, where an outer casing (4) of the profile forms all spring components. The outer casing exhibits a wall thickness and forms a closed line in cross section. The spring is manufactured with different elastic couch zones from different plastic material, polymer compounds and/or wall thickness for varying spring stiffness of the mattress.
