Abstract (en)

[origin: EP2226170A1] The device (10) has a supply chain frame (12) relatively arranged towards a transport chain frame (11). A product to be cut slice conveyed towards the transport chain frame is transported from the supply frame into a region between the supply and transport chain frames during transport process. The product to be cut is pierced from chain points of the transport chain frame and is transported into a storage device. Movement of chains (3) of the transport chain frame is synchronized with chains (5) of the supply chain frame.
