Abstract (en)

[origin: EP2226188A2] The device has a folded covering layer (2) that encloses intermediate layers (3, 4). Inwardly aligned impressions are provided at longitudinal edges of a cushion package. Deforming tools are arranged in a form device. The deforming tools are attached to a side edge of the covering layer and comprise deforming fingers arranged diagonally in height direction. The deforming fingers compress paper layers (1). The deforming tools are driven synchronously to clamp the cushion package. The deforming fingers are aligned approximately parallel to each other.
