Abstract (en)
A device for forming, filling and closing food-product containers (4) is disclosed, comprising a forming pipe (1) on which is slidably wound a film of plastics (3) suitable for being closed by welding pliers (12) under the outlet mouth (30) of the pipe (1) to define a resting base for the product (4) in free fall inside the film of plastics (3). Said device further provides a deformable sleeve (6) that is made of rubber material that is mounted at the outlet mouth (8) of the pipe (1) and is suitable for being closed below by the pliers (12) such as to soften the blow of the product (4) in free fall against the resting base defined by the closure of the pliers (12). (Fig.3).
