Abstract (en)

[origin: EP2226253A1] The machine (10) has a handling device and an associated dimensioning part for adapting to dimensions of packaging goods to be handled, where the handling device and the dimensioning part are commonly exchangeable. The handling device and the dimensioning part are movable between a working position at the machine and a storage position in a magazine (40). Rails (44) are arranged between the machine and the magazine for horizontally conveying the handling device and/or the dimensioning part between the working position and the storage position. An independent claim is also included for a method for controlling a handling and/or packing machine.
