Abstract (en)

[origin: EP2226437A1] The cistern (1) has a container (2) for storing rinsing water, and a discharging valve arranged in the container. An operating device has an operating plate (30) that is arranged in front of an access opening. The plate is arranged at a fastening frame, and a slide (16) and an insertion opening (17) are provided for filling additives in the container. A supporting device is arranged in front of the opening, and moves the plate from an operating condition to a filling condition in which the access opening is accessible for filling the additives in the container. An independent claim is also included for a method for supplying additives into a cistern.
