Abstract (en)
[origin: EP2226444A2] The wall (1) has an interior brick wall element (2), an intermediate insulating wall element (3) and an external wall element (4) that are connected and/or coupled with each other in a form-fit manner. The wall elements are formed at surfaces with complementary profiles (13) e.g. projections and recesses, and a plaster is applied to the interior wall element or the exterior wall element. The insulating wall element is made of high-quality dimensionally stable insulating substances e.g. expanded polystyrene foam (EPS), extruded polystyrene foam (XPS) and wood wool. An independent claim is also included for a method for producing a wall.
