Abstract (en)
[origin: EP2226458A2] The glazing has an insulator glazing comprising a fire protection disk (30) and a counter glass disk (40), where the fire protection disk and the glass disk are held together by a spacer (25). The fire protection disk comprises an attachment (31), which is projected in a direction of a disk plane over an edge of the counter glass disk. The fire protection disk and the glass disk are connected together by a sealing (24), which rotates in a region of an edge of the counter glass disk. The protection disk is extended to form the attachment in a region of a disk side by the sealing.
