Abstract (en)
[origin: EP2226557A1] The component (E) has a drain container (1) containing a cover (6), and a lighting device (B) provided with a light element (11) i.e. LED, in the cover. The lighting device is supplied with current from a network. An inductive power transfer device (V) is provided between the network and the lighting device for permanent supply of the light element with the current. The inductive power transfer device is formed without a galvanic contact and comprises a feed part (13) made of plastic. The lighting device comprises a board (9) and is injected into a die-casting-mold part.
