Abstract (en)

[origin: EP2226603A2] The device (1) has a metal plate (2) attached to an object to be protected, and another metal plate (3) arranged on a side, which is turned towards the object to be protected. The latter metal plate is attached to the former metal plate only at an edge side of the former metal plate and detachably lies at the former metal plate, without an intermediate space. The metal plates are arranged parallel to each other, where the protection device comprises an inclination angle (delta) between 40 degree and 50 degree opposite to a vertical vehicle axis (4). The plates are made of armor steel.
